Spaghetti

GRASP half a pound of macaroni in your hand, put the ends down in a kettle of boiling water, and as they soften, slightly press until the whole is under the water. Shake it apart with a fork, add a teaspoonful of salt, and boil rapidly for twenty minutes. Drain, throw it in cold water for fifteen minutes, and drain again. Return it to the kettle, cover with a pint of good stock to which you have added a teaspoonful of beef extract. Coŏk slowly for twenty minutes; add a level teaspoonful of salt, two rounding tablespoonfuls of butter, and two tablespoonfuls of tomato paste mixed with half a cupful of good cream. Stir constantly until it reaches the boiling point. Turn on a large platter, and pass with it grated parmesan.

Summer Squash

CUT the squash in eighths; take off the rind and cut each piece into cubes of about one inch. Throw them into boiling, salted water, and cook slowly for thirty minutes until transparent. Drain carefully in a colander, dish, and cover with cream or Hollandaise sauce.

Stuffed Potatoes

WASH four large potatoes and cut them into halves crosswise. With a "scoop" take out the centres, leaving a wall at least half an inch thick. Bake these shells in a hot oven for twenty minutes. Chop sufficient meat to make a pint; add a level teaspoonful of salt, a saltspoonful of pepper, a tablespoonful of grated onion, a tablespoonful of chopped parsley; add sufficient stock to make the mixture moist (about half a cupful). Remove the potatoes from the oven; fill the shells with this mixture, rounding it up; dust them lightly with breadcrumbs and bake until browned. Serve as a supper or luncheon dish.

Sweet potatoes may be used in place of white if preferred.

Hashed Brown Potatoes

HASH sufficient cold boiled potatoes to make a pint; add two level teaspoonfuls of salt, a saltspoonful of pepper, and about four tablespoonfuls of cream. Put a tablespoonful of butter in a shallow frying-pan; when hot turn in the potatoes; pack them down smooth and even with a spatula; cook slowly until they are thoroughly browned on the bottom. Fold them over as you would an omelet, and turn them on a heated dish.

Tomatoes, French Fashion

SCALD and peel small, solid tomatoes; to each six allow half a pint of cream sauce made by rubbing together a rounding tablespoonful of butter and one of flour; add half a pint of milk; stir until boiling. Take from the fire, add a level teaspoonful of salt and a saltspoonful of pepper. Put a tablespoonful of the sauce in the bottom of a custard-cup; then put in a tomato and cover with another tablespoonful of sauce; dust the top with breadcrumbs; stand the cups in a pan of boiling water, and bake in a moderate oven for half an hour. Serve in the cups.

To Cook Rice

WASH half a pound of rice through several cold waters; drain, and stand it aside for thirty minutes. Sprinkle it slowly in two quarts of rapidly boiling water; boil continuously for fifteen minutes; drain, toss it with a fork, and stand it in the oven for ten minutes to dry.

Serve in an uncovered dish.

Stuffed Tomatoes

CUT a slice from the stem ends of the tomatoes; scoop out the seeds and a portion of the hard centres. To each six good-sized tomatoes allow a pint of breadcrumbs, a tablespoonful of chopped parsley, a tablespoonful of grated onion, a level teaspoonful of salt, a saltspoonful of pepper, and two tablespoonfuls of melted butter; mix, stuff this in the tomatoes, heaping it slightly. Stand them in a baking-pan, add half a cupful of water, and bake in a slow oven for three-quarters of an hour, basting once or twice with a little melted butter.

Corn Pudding

SCORE down the centre of each row of grains of twelve ears of corn, and with a dull knife press out all the pulp. Separate four eggs, beat the yolks; add half a pint of milk; pour this slowly into half a pint of flour; when perfectly smooth strain the mixture into the corn; add a level teaspoonful of salt, a saltspoonful of pepper, and fold in carefully the well-beaten whites. Pour the mixture in a shallow, greased baking-pan, and bake in a moderate oven for thirty minutes. Serve at once.

This is a nice accompaniment to roasted beef.

Stewed Turnips

PARE and cut the turnips into dice. Put them in boiling, unsalted water, and cook below the boiling point, about 180° Fahrenheit, until transparent and white. New turnips require about twenty minutes, old ones forty-five minutes. Drain, turn in a heated dish, and cover with cream sauce.

Spinach

WASH the spinach through several cold waters; pick the leaves from the roots, shake them until dry. Throw them in a hot kettle, cover with a quart of boiling water, add a level teaspoonful of salt, boil rapidly for five minutes; drain. Put the spinach back in the kettle, cover, and steam gently for fifteen minutes longer. Drain, press slightly, and chop very fine; then press the whole through a colander, in a granite or porcelain saucepan. To each peck of spinach add two tablespoonfuls of butter, a level teaspoonful of salt, two tablespoonfuls of good stock, a tablespoonful of cream, and a dash of pepper; stir carefully until very hot. Pack the mixture in a heated bowl to mould, and turn it on a round dish. Have ready cut in eighths some hard-boiled eggs; arrange these on top of the spinach, garnish the dish with triangular pieces of buttered toast, and send at once to the table.

Cook kale in precisely the same manner.

Sauce Hollandaise

HEAT in a saucepan a slice of onion, a bay leaf, a little chopped celery or a saltspoonful of celery seed, a clove of garlic mashed, and four tablespoonfuls of tarragon vinegar. When reduced one-half strain and cool. Rub together one tablespoonful of butter and one of flour; add half a pint of boiling water and stir until boiling. Take from the fire; add the yolks of two eggs beaten; reheat; add a tablespoonful of butter cut in blocks, half a teaspoonful of salt, a dash of pepper and the vinegar. Press through a fine sieve.

This is one of the best of the fish sauces.

A plain sauce Hollandaise may be made by adding the yolks of two eggs slightly beaten and two tablespoonfuls of tarragon vinegar to English drawn butter.

Cream of Horseradish Sauce

ADD to six tablespoonfuls of grated horseradish the yolk of one egg and half a teaspoonful of salt; mix thoroughly; add a tablespoonful of good vinegar and then fold in carefully a quarter of a cupful of cream whipped to a stiff froth. If the horseradish is already in vinegar omit the tablespoonful of vinegar and press the horseradish until dry.

This is one of the nicest of sauces to serve with cold roasted beef or mutton, or with hot corned beef.

Sauce Vinegarette

ADD to four tablespoonfuls of good consommé half a teaspoonful of paprika, two tablespoonfuls of tarragon vinegar, half a teaspoonful of salt, a teaspoonful of sugar, a tablespoonful of capers, a tablespoonful of grated or finely chopped onion and two tablespoonfuls of chopped gherkin.

Serve this sauce with boiled calf's head, pig's feet or plain boiled lobster.

Mayonnaise Sauce

PUT the yolks of two eggs in a cold soup-dish or bowl; beat lightly, add a saltspoonful of salt, and slowly, drop by drop, six tablespoonfuls of olive oil; add a few drops of lemon juice and it will be ready to use.

Where a large quantity of dressing is needed add more oil. Two eggs will hold a pint of oil, providing you add a little vinegar now and then.

Cucumber Sauce for Fish

PARE and grate on a sieve four large crisp, fresh cucumbers; when the pulp is thoroughly drained turn it in a bowl; add a teaspoonful of pepper, one medium-sized onion grated, a level teaspoonful of salt and two tablespoonfuls of tarragon vinegar. Mix and stir in just at serving-time six tablespoonfuls of cream whipped to a stiff froth.

Sauce Tartar

CHOP a tablespoonful of parsley very fine and rub it to a paste. Add it to a mayonnaise sauce; mix and add a tablespoonful of chopped capers, two or three olives chopped very fine, a small gherkin or a tablespoonful of any chopped pickle, and a teaspoonful of onion juice.

This sauce may be served with lobster cutlets, broiled or fried fish, deviled crabs or broiled tenderloin.

English Drawn Butter

RUB together a tablespoonful of butter and one of flour. Add slowly half a pint of boiling water, beating all the while. Boil for a moment, take from the fire; add half a teaspoonful of salt, a saltspoonful of pepper, and then stir in another tablespoonful of butter.

Serve with summer squash, stewed cucumbers or other green vegetables.

By adding the juice of half a lemon this sauce will answer nicely for fish.

Sauce Bearnaise

BEAT the yolks of four eggs; add four tablespoonfuls of olive oil and four of stock; stir and cook over hot water until jelly-like. Be careful not to allow it to curdle. Take from the fire; add half a teaspoonful of salt, a saltspoonful of pepper and the scented vinegar made according to the recipe for sauce Hollandaise. This sauce is served cold, as an accompaniment to broiled steak, or fish, either broiled or planked.

Golden Sauce

THIS sauce is also served with ice cream. Put a pint of cream in a double boiler; when hot add the yolks of three eggs thoroughly beaten with half a cupful of sugar; cook a moment; take from the fire and add a tablespoonful of gelatine that has been soaking for fifteen minutes in half a cupful of cold milk. Strain, and when cold add the flavoring, which may be the juice and grated rind of an orange, vanilla or any flavoring in common use.

White, Milk or Cream Sauce

RUB together a tablespoonful of butter and one of flour; add half a pint of cold milk, stir until boiling; take from the fire, add half a teaspoonful of salt and a saltspoonful of white pepper. Serve with boiled mutton, potatoes, white meats or green vegetables.

Nun's Butter

WASH, by pressing under water, a quarter of a pound of butter; beat to a cream, and add gradually half a pound of powdered sugar. When very light drop in the unbeaten white of one egg, beat for five minutes, add the second white and beat for five minutes again. Put the mixture in the serving-dish, dust it with grated nutmeg and stand on the ice.

Serve this sauce with dumplings or hot puddings.

Our Cooking-School Sauce

WASH and beat to a cream half a pound of butter; add gradually one cupful of powdered sugar, and, one at a time, the yolks of three eggs. When very light add a gill of boiling water and stir over hot water until the mixture thickens; then take from the fire and add eight tablespoonfuls of orange juice or other flavoring. Or add nutmeg and a little lemon juice.

Use this sauce for plum or any rich boiled pudding.

Cranberry Sauce

WASH and pick over a quart of cranberries; put them in a granite or porcelain saucepan with one pint of cold water; cover the saucepan, bring to boiling point and boil rapidly for five minutes. Press through a colander. Add one pint of sugar, stir until the sugar is dissolved and turn the sauce out to cool.

For Puddings and Ice Cream

Liquid Pudding Sauce

MIX a rounding tablespoonful of flour with half a cupful of sugar; add hastily half a pint of boiling water; boil for a moment and pour, while hot, into one egg well beaten. Flavoring of any kind may be added to this sauce—the grated rind and juice of one lemon or orange, or a suspicion of mace, with the juice of half a lemon and a teaspoonful of vanilla.

French Tomato Sauce

RUB together a tablespoonful of butter and one of flour; add half a pint of strained tomatoes; stir and cook for five minutes; add a teaspoonful of salt, one of onion juice and half a teaspoonful of ground mace. Rub the mixing-spoon with a clove of garlic; stir and cook the sauce a moment longer; take from the fire, add five tablespoonfuls of thick cream. Strain through a very fine sieve, and serve with boiled or fried chicken, or chicken cutlets.

Grape Sauce

BOIL a pound of sugar and half a pint of water together for ten minutes until they form a thick syrup; add the juice of a lemon, and when cold add half a pint of grape juice. Pack in ice until serving-time.

Café Parfait

MAKE and freeze one quart of coffee ice cream; at serving-time stir in a pint of cream that has been whipped to a stiff froth. Serve immediately in meringue shells or in dessert-glasses.

Frozen Strawberries

MASH a quart of strawberries, add half a pound of sugar and the juice of two lemons; stand aside for one hour. Boil together a pint of water and half a pound of sugar; strain and cool. Add the cold syrup to the strawberries, pour them in the freezing-can, and turn slowly until the mixture is frozen hard. Serve in glasses with whipped cream.

Alaska Bake

PACK a round or brick mould with vanilla or strawberry ice cream; cover and bind the seams with strips of muslin dipped in melted paraffin. Repack in ice and salt, and stand aside for at least two hours. At serving-time turn the cream on a folded napkin on a platter. Beat the whites of four eggs until light; add four tablespoonfuls of powdered sugar, and beat until light and dry. Cover the cream thoroughly with this meringue, and dust with powdered sugar. Stand the platter on a cold board, and run the whole in a hot oven for just a moment to brown. Serve at once.

Grape Sherbet

BOIL one pound of sugar and one quart of water together for five minutes; strain and cool. When cold, add one pint of unfermented grape juice and two tablespoonfuls of lemon juice. Turn the mixture into the freezer and stir slowly until frozen. Remove the dasher and stir in a meringue made by beating the white of one egg to a stiff froth and adding one tablespoonful of powdered sugar. Repack the can and stand aside for one hour and a half.

All sherbets may be made after this recipe, substituting the same amount of other fruit juices.

Pineapple Water Ice

ADD one pound and a half of sugar to one quart of water. Boil rapidly for five minutes; then cool. When cold add the juice of two lemons and one quart of grated pineapple. Mix, turn into the freezer and freeze, stirring slowly.

If canned or preserved pineapple is used allow only one pound of sugar.

Orange Water Ice

GRATE the yellow rind from three oranges into one pound of sugar. Rub until the sugar is quite saturated with the orange oil. Add a quart of water, bring to boiling point, boil for five minutes; take from the fire, strain, and when cold add the juice of twelve large oranges and one lemon.

Raspberry Water Ice

TAKE one quart of red raspberries, one quart of water, the juice of two lemons and one pound of sugar. Add the sugar and lemon juice to the berries; stir, and let stand for one hour; press through a sieve, add the water, turn into a freezer and freeze.

Pressed Chicken

BOIL carefully a four-pound fowl; when the meat is very tender take it from the water and stand aside to cool. There should be about one quart of liquor when the fowl is done; to this add two-thirds of a box of gelatine that has been soaked in a cupful of cold water for half an hour, a tablespoonful of onion juice, a palatable seasoning of salt and pepper and the juice of a lemon. Add the whites of two eggs slightly beaten; boil hard for five minutes, and strain through flannel or two thicknesses of cheesecloth. Take the meat from the chicken, remove the fat, bones and skin. Put a layer of meat in the bottom of a square bread-pan or mould, then a layer of chopped parsley, a layer of thin sliced hard-boiled eggs, another layer of chicken in good-sized pieces. When the mould is full pour over the clarified gelatine and stand aside over night. Serve cold garnished with any accessible greens.

Potted Fish

BOIL four pounds of halibut or any white fish; when cold pick it apart in large blocks; add two teaspoonfuls of salt, two saltspoonfuls of pepper and one blade of mace. Pound the fish to a paste, adding gradually a quarter of a pound of melted butter. Pack this in small jars or glasses, cover with melted paraffin, then with paper, and keep in a cold place.

Hungarian Fish

CHOP a pound of raw halibut very fine; add twenty-four almonds that have been blanched and chopped, a small onion grated, a level teaspoonful of salt, a saltspoonful of black pepper and the juice of two lemons. Pack this in small pots or moulds, cover, stand in a pan of water, and cook slowly in the oven for one hour. Stand aside to cool. When ready to serve turn it from the moulds on to lettuce leaves and cover with sauce tartar or mayonnaise dressing.

This is a very nice dish for Sunday night supper.

Pickled Fish

PURCHASE four pounds of salmon or halibut. Wash; put it in a kettle and cover with boiling water; add a tablespoonful of salt and boil gently for thirty minutes. When done drain and stand aside to cool. Take off the skin, cut the fish into convenient pieces. Put one quart of good vinegar in a porcelain-lined kettle, add two blades of mace, six whole

Chicory Salad

THIS, to me, is the most delightful of all dinner salads. Wash the chicory, trim the ends, leaving each piece about a finger's length. Put in a bowl half a teaspoonful of salt, a teaspoonful of grated onion, a saltspoonful of pepper; mix, and add four tablespoonfuls of olive oil; rub until the salt is dissolved; add a tablespoonful of tarragon vinegar; mix, pour over the chicory and serve at once.

Asparagus Salad

TRIM neatly one bunch of asparagus, stand it in a kettle of boiling, salted water, cover, and cook for forty-five minutes. Drain and cool. Arrange neatly upon a flat dish and serve very cold, with French dressing.

String Bean Salad

SELECT young, tender beans; string and cut each one in three pieces lengthwise. Cover with boiling, salted water; boil for twenty minutes, and drain. Throw them in cold water for ten minutes; then put them in boiling, unsalted water, and cook for fifteen minutes longer. Drain and cool. Arrange them neatly on a small platter, cover with French dressing, sprinkle with chopped parsley, and serve at once.

Cauliflower Salad

SOAK a head of cauliflower in cold water; break it in flowerets and cook in salted, boiling water for thirty minutes. Keep it perfectly white; if it boils too long it will lose its color. When done lift it carefully and stand aside to cool. At serving-time arrange it in a salad-bowl, sprinkle with chopped parsley and a tablespoonful of onion juice, then pour Italian dressing over all, and serve.

Woods Salad

SCALD and peel solid tomatoes, take a slice from the stem ends, scoop out the centres, and stand them on the ice to cool. Chop a handful of sheep sorrel, mix it with an equal quantity of chopped cress, finely chopped mushrooms, and chopped mint; fill this in the tomatoes, stand them on lettuce leaves, and pour French dressing over them.

Partridge berries may be substituted for the mushrooms when the latter cannot be procured.

Carrot Salad

CUT young and perfect carrots in thin slices, then with a vegetable cutter cut them in fancy shapes. Put them in a kettle of boiling, unsalted water, cook gently for one hour, drain and cool. At serving-time arrange them neatly on lettuce leaves, cover with French dressing, and serve.

A Simple Russian Salad

LINE a salad-bowl with crisp lettuce leaves. Put over one or two tomatoes that have been peeled and chopped fine. Add a mashed anchovy to the recipe for French dressing, pour it over the salad, mix, and serve.

French Dressing

PUT half a teaspoonful of salt and a saltspoonful of pepper in a bowl; add slowly, mixing all the while, four tablespoonfuls of olive oil. When the salt is dissolved add one tablespoonful of tarragon vinegar or lemon juice. Mix and use at once.

Italian Dressing

PUT in a bowl half a teaspoonful of salt, a dash of cayenne, a teaspoonful of tomato paste, or a tablespoonful of tomato ketchup; add gradually, mixing all the while, four tablespoonfuls of olive oil. Add one clove of garlic that has been mashed to a pulp, and a tablespoonful of tarragon vinegar.

Lettuce Salad

CUT the lettuce in four quarters, beginning at the bottom. Remove the leaves carefully without mashing or pressing them. Carefully wash each leaf and put it on a clean, soft napkin; dry and arrange them loosely in the salad-bowl. Sprinkle over chopped chives, parsley or onion, as you please. At serving-time have this brought to the table, also the oil and vinegar. Dust the salad with salt and pepper. Rub the spoon with garlic, measure the oil, pour it over the lettuce, mix and toss with a salad fork and spoon until the oil is evenly distributed. Then pour over the vinegar, toss again, and serve.

My Favorite Salad

SELECT a white, crisp head of lettuce; cut at the base, break it apart, and throw the leaves in cold water for an hour. Cut in very thin slices a carefully boiled beet; shave sufficient cabbage to make a pint; throw it in ice water. At serving-time shake and dry the lettuce and the cabbage. Put a layer of lettuce leaves in the bottom of a salad-bowl, put over a portion of the cabbage, then some beets, a half teaspoonful of celery seed; then another layer of cabbage and garnishing of beets. Peel two tomatoes, cut them in halves, press out the seeds, and cut the flesh in cubes of an inch. Put these around the edge. Put in the centre of the bowl the heart of the head of lettuce, and stand it aside until serving-time. To dress, dust with a teaspoonful of salt, a saltspoonful of pepper, sprinkle over all four tablespoonfuls of mint sauce, add a tablespoonful of onion juice, a teaspoonful of soy, or Worcestershire sauce, and the same of mushroom ketchup that has been well mixed with a clove of garlic thoroughly mashed. Add eight tablespoonfuls of olive oil, and mix until each leaf of the lettuce is thoroughly covered with the dressing. Add four tablespoonfuls of grape and tarragon vinegar mixed; mix again, and serve immediately.

AS SOON as summer draws near take down all draperies, remove all carpets from the floors, and have the floors nicely painted. If properly done they will not need doing again for several years. Keep your rooms free from dust, exclude the strong sunlight, and you will have a delightfully cool house.

Do not forget that, for health's sake, for an hour at least each day *every room* in your house should have a thorough airing and the sun be allowed to shine in, no matter how hot or how cold the day.

Home-Made Ice-Box

TAKE a store box, any convenient size, and place in this a smaller box, having the bottom and space around the sides packed with sawdust. Have a galvanized iron pan made, the size of the inside box and half as deep, to hold the ice. Have the pan made with a spout six inches long to drain off the water as the ice melts. Bore a hole the size of the spout through the double bottom and sawdust packing to admit the spout. Short legs may be nailed on the sides of the box and a vessel set underneath to catch the drippings. Put on a tight board cover. A shelf may be placed in the box above the ice. This box will keep ice for three days.

Substitute for a Refrigerator

SELECT a large cracker box with a hinged cover. Knock out the bottom and cut "windows" in each side, leaving a three-inch frame, over which tack wire gauze. In the coolest part of the cellar dig away the earth to a level depth of three inches and fit the box into the space.

Mix plaster of Paris to a consistency of thick cream and pour into the box for a half-inch-thick bottom. Twenty-four hours will harden it sufficiently. Put a hook and catch on the lid. A box of this sort can be cleaned easily, and insects cannot penetrate it.

Secret of Keeping Flies Out of a House

NEVER allow a speck of food to remain uncovered in dining-room or pantry any length of time after meals. Never leave remnants of food exposed that you intend for cat or hens. Feed at once or cover their food up a distance from the house. Let nothing decay near the house. Keep your dining-room and pantry windows open a few inches most of the time. Darken your room and pantry when not in use. If there should be any flies they will go to the window when the room is darkened, where they are easily caught, killed or brushed out.

To Drive Mosquitoes Out of a Room

WHEN retiring for the night take with you a leaf of the castor-oil plant (*Ricinus communis*). After bruising it to bring out the odor, wave it a minute or two about the room to get the air filled with the odor, which is very disagreeable to mosquitoes. They will soon disappear, not to return that night.

This plant is grown by many families for the "mole beans," and the new variety, *Zanzibarensis*, is one of the most decorative plants for the lawn, besides being equally effective for mosquitoes.

To Keep a House Cool in Summer

IN THE early morning open wide every window and door for two hours. Then close the doors, leaving each window open not more than six inches. Leave this opening in every window all over the house, high and low, east and west, and draw the shades down close to the edge of the opening.

By keeping the sun out and providing a circulation of air, a house may be kept cool.

Masonry Pit in the Cellar for Food

"A FEW years ago," writes one correspondent, "ice being expensive, my husband thought of a way to keep things cold without ice. In the cellar floor he dug a hole three feet wide, four feet long, and two feet and a half deep. He masoned it with brick at the sides and cemented the bottom. This made it dry and easy to wash and keep clean. He then fitted on a snug cover with an air-pipe running through it. In this box we have kept things cold and sweet all summer without any expense whatever."

To Deal with the Pestilent Fly

SCREEN every door and window from top to bottom. Fit the window screens outside the sash and have the lower half adjustable. If a few flies get in slap them with a folded newspaper; but if there are many wait till four o'clock, which is their hungry time, and darken the room, except one narrow ray. Set there a plate of poison paper and sweetened water. Lock the door and leave them to their fate. Plates of fly-paper on a shelf outside the kitchen door will destroy myriads. To make a shelf to hold the plates of fly-paper nail up a box opening outward.

How to Drain a Refrigerator

HAVE a stout tin funnel made, seven inches in diameter at the top. The tube portion should be at least eight inches long and of uniform diameter. Bore a hole through the floor directly under the drain-pipe of the refrigerator; insert the funnel, then force a piece of rubber tubing (a tight fit) over the funnel from the cellar side. Pass the tubing through a hole cut in the screen frame of a cellar window, and drain into any convenient place. This avoids the necessity of continually emptying the drain-pan, and prevents the overflow that frequently occurs when it is forgotten.

Another Device for Draining a Refrigerator

THIS simple device saves the inconvenience of having a drip-pan under the refrigerator: If the refrigerator is placed near the outer wall get a piece of rubber hose long enough to reach from the waste-pipe to the outside of the wall. Bore a hole through the wall under the refrigerator, where baseboard and floor meet. Attach the hose to the waste-pipe and pass through the hole in the wall. A small trough outside should carry the water away from the house.

How to Trap Moths and Other Millers

AS SOON as the lamp is lighted in the evening set it in a shallow milk-pan in about four inches of water. Have no other lights unless arranged in this manner. The millers will fly around the light and drop into the water.

An Easy Way to Wash a Heavy Comfortable

EXAMINE the comfortable, and if you find soiled spots soap them and scrub with a small brush. Hang the comfortable on a strong line and turn the hose on. When one side is washed turn and wash the other. The water forces its way through cotton and covering, making the comfortable as light and fluffy as when new. Squeeze the corners and ends as dry as possible.

Summer Housekeeping Without Ice

PARTLY fill with water a shallow granite-ware pan. Place it in an open, shady window where there is a good draught of air. In this put bottles of water, milk and cream (sealed), wrapped with wet cloths reaching into the water. Put butter in an earthen dish deep enough to prevent water getting in. Over this turn an earthen flower-pot wrapped with a wet cloth reaching into the water. The pan should be fixed every morning and evening. With several of these pans one can keep house very comfortably without ice.

Convenience of a Slate in the Kitchen

I WONDER if many housekeepers know what a convenience a slate can be when hung on the kitchen wall with a pencil attached. It is a place to write down needed articles and kitchen supplies as they run low. If you send the washing out each week and must make a list, scratch on the back of the slate, with a pointed nail, in an even column, the names of all articles likely to be sent. Then, each week, you have only to write the number before each name and erase it when the clothes are all returned.

A Simple Refrigerator

PROCURE a wire meat-safe—that is, a box covered by wire netting on three sides, with a fly-proof door. On top place a deep pan filled with water. Take a piece of burlap the height of the pan and safe, and of sufficient length to reach around the entire safe. Tack it fast where the door opens and closes. Tuck the upper edge in the water, and you will have a well-ventilated refrigerator that costs nothing but water to maintain.

Place it where there is a draught and where the dripping will do no damage.

A Refrigerator Screen

BUY an ordinary bedroom screen, preferably of the largest size. Place upon each pair of horizontal bars, instead of the shirred goods ordinarily used, a plain, ungathered linen crash or cotton sheeting, the heavier the better, with a simple outline design in wash silk or linen.

Sponge the sheeting with warm water, leaving a foot at the bottom dry to prevent dripping. Then place the screen in an open window or doorway, and it will be found to bring down the temperature of the room to a refreshing degree.

A Siphon for Emptying a Refrigerator Pan

HOUSEKEEPERS who have no drain for their refrigerator know the annoying consequences of neglecting to empty the refrigerator pan. A siphon does the work nicely. Take twelve feet of very small rubber tubing, fill it with water, close both ends, put one end in the pan, the other out of a near-by window and down below the floor level. Then open both ends. The water will begin to run out and will continue to do so all summer. The flow is regulated by raising or lowering or slightly closing the outer end.

One Way to Keep a House Cool

KEEP the windows open all night. Rise early in the morning, put a chair at the foot of the bed, and throw the mattress over it, so that the wind can blow under it. Beat up the pillows and put them in or near the windows—in the sun, if possible. Leave till after breakfast. After thoroughly airing the house, close the blinds by nine A. M. and the house will keep cool all day.

Suggestions for Outdoor Life

Picnic Luncheons

A MOTHER of a large family, with no servant, gets rid of dishwashing sometimes during the hot weather by packing the noonday luncheon in a paper-lined basket and playing picnic with the children under the trees near the house.

The children are quite ready to accept the simple luncheon and do without dishes if only mother will picnic with them.

A Tent for Use as a Dining-Room

TO SIMPLIFY housekeeping during the heated term, and also to get more outdoor air, set up a tent with a large awning. In such a one you can take your meals in pleasant weather. Use the simplest table service that you can devise. Wash the dishes on the table and keep them in a little cupboard in the tent. The food should be cooked in the kitchen and all the cooking utensils washed there. The family could help to carry the food to the table in the tent. All will enjoy the cooler atmosphere.

Luncheon on a Bread-Board

SOME hot day when the house is heated up with baking or ironing, lay a white cloth over the bread-board and serve your luncheon on it. Use as few dishes as possible. The bread can be buttered, and the coffee, with the cream and sugar added, can be poured from a pitcher. Carry the board to the porch or out under a tree, where it can be set on a little stand. Call the family, and see how much better they will enjoy the meal outdoors than in the hot dining-room.

A Place to Work Outdoors

DURING the summer one should live in the open air as much as possible. Have a chair and table on the back porch, where you can prepare vegetables, fruit, etc. Failing the porch, if you have a grape arbor or tree in the back yard fasten a shelf to one of them. This shelf should be fastened with hinges and have two legs attached with hinges, on which you will rest the front part of the shelf when it is lowered. Here one can bring a chair and work in the fresh air.

Helpful Hints for Housewives

How One Mother Lightened Laundry Work

THE hardest part of the summer work for the mother of four children, who has no servant, is the washing and ironing. One woman solved the problem in this way: Rompers of blue chambray for the baby of two eliminated white dresses and skirts; seersucker dresses for the girls of eight and eleven, and blouses for the boy of six, were washed and never ironed. Much of the underclothing was folded when taken from the line and put away sweet and clean. White sheets and pillow-cases were sent to the laundry. Enameled tablecloths and paper napkins completed the program.

A Basket Will Save Steps

DURING the warm weather one should plan to save as many steps as possible. Keep a market-basket within reach. Put all the articles that need to be taken upstairs in the basket as they collect, and carry them all up at once. Several jars of fruit, empty jars or anything belonging in the cellar can be carried in this way instead of a few at a time.

To Save Work in Hot Weather

WHEN frying or broiling spread a large newspaper on the hearth. It will absorb all drippings and "sputterings" of fat. To remove and burn the paper is much easier than to clean a greasy hearth.

To Do Away with Wiping Dishes

MAKE a rack by putting a shelf over the kitchen sink, slanting it so that the water will drain off into the sink. Put a lattice railing about six inches high at the front and ends of the shelf so that dishes can be set against it on their edges without falling out. Have two pans of hot water. Wash the dishes in one and rinse them in the other. Set them on edge in the rack and leave until dry.

A Farm on a Table

By Sarah E. Scales

THIS is the season when those in charge of children may suggest play so combined with occupation as to contain interest enough to amuse them through many vacation days. The method here described is so elastic that it may be adapted to almost any group of children.

The table was, of course, the foundation. The top was made of boards laid side by side, till it was about five feet by three in size. An old table served for the support; to it the top was fastened securely.

Around the edges a moulding six inches deep was fitted, consisting of strips of board of sufficient thickness to keep the contents of the table from falling off.

Cracks between the boards were covered with strips of wood, which were nailed over them, but in one corner was left a small opening to allow standing water to drain.

This table was placed in an unused shed, where windows allowed the sun to strike it in the forenoon, but if the weather were pleasant one could move it outdoors.

Over the entire surface of the table was spread sand or sandy soil, about half an inch deep. The neighborhood was scoured for earth mould, which was finally found in an unoccupied lot. This was spread over the sand until it filled the table to within an inch or more of the top of the moulding.

THE COMPLETED FARM

What to do for trees was solved by a contribution of a large pine twig, quickly metamorphosed into little trees, standing stiff and green in one corner of the table.

Hills and valleys appeared as by magic, while a depression near the trees was filled by a small shallow tin dish sunk in the earth, the bottom of which was strewn with sand, and the sides covered with grass, sod or moss. This, when completed by the addition of water, represented a lake or pond, where the Noah's Ark cattle could drink, and upon which little boats or canoes could be launched.

Toy hoes, shovels and rakes made of iron were used by the little boy, but the older children preferred to make their own farming implements of tin or wood.

Grain and hay for food for the cattle decided the kind of seed to be used in the plowed land. Three or four sections were marked out and planted with corn and oats, and, as quick growth was desired, canary seed was substituted for grass seed. This germinated in a few days and was quite a success.

Places for house and barn were marked out and stakes driven.

A vegetable garden was then arranged back of the house location—peas, beans, squash, lettuce and other seeds being chosen for it.

* * *

A flower-plot bloomed into beauty at once, window and lawn boxes yielding pansies, nasturtiums, morning-glories, geraniums and flowers galore.

Little round pill-boxes painted or stained were made to do duty for receptacles for ferns or decorative plants on the lawn near the house.

Fences were built to separate the fields from the garden. The need of water being felt, a well was made by sinking a small flower-pot, the outlet being closed up.

While waiting for things to grow the buildings were made, stiff manila paper or heavy pasteboard answering the purpose for these children. Older children might be able to use thin strips of wood. The tools used were scissors, a blunt awl, a rule and a pencil.

Two ways of making the house are given. The folded example was chosen for the dog-kennel, pigeon-house, chicken-coop and barn.

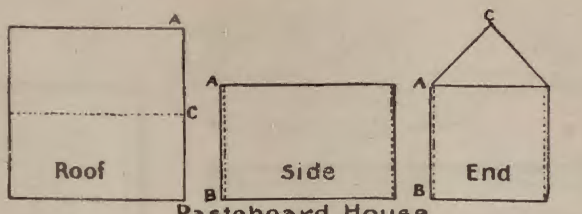
To make the dog-kennel a twelve or ten inch square of manila paper was selected. With this spread out points indicating one-half and a quarter of each side were marked, and lines connecting these points were ruled carefully, and over the dotted lines the blunt awl was passed beside the rule, scoring, not cutting, so that the paper would bend easily. In the illustration the dotted lines denote folds, while the black ones show where cuts should be made.

Slip 1 over 2 after folding the little squares on their dotted diagonals, for the gable or triangular ends, and then paste.

A pasteboard or a wooden foundation may be used and the buildings be fastened by means of strips of paper glued to the sides and bottom.

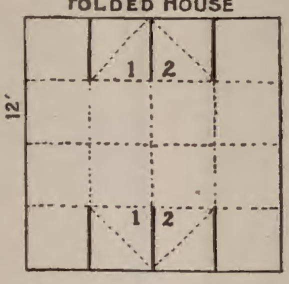
The pasteboard house was made, as shown, of two ends, sides and one roof-piece, cut from heavy material and tacked to four one-inch square pieces of wood as long as the sides were high.

Score through the middle of the roof-piece, and fold for the ridge-pole. Fasten at the corners to the main part of the house, and cut a hole for the chimney and make it. Water-color was used for painting.



Pasteboard House

Folded House



In making the chicken-coop the corner squares were removed, the gable ends made as before, with one triangle slipped over the other; the oblong sides were then folded under and pasted. Slats were cut out, and a mother hen installed therein with her family roundabout feeding.

Furniture for the house made of wire bent into shape, and wound or woven with raffia, braided raffia mats for the floor, together with many other things, took the time of the girls, while the equipment of the barn occupied the boys.

The barn contained farm wagons, brooms for sweeping the floor made of twigs of raffia cut into lengths, and milking-stools formed from broom-handles cut in suitable circles in which three wooden legs were inserted. Wooden spools and strips of wood were used for the wagons, while great ingenuity was shown in the making of the other utensils.

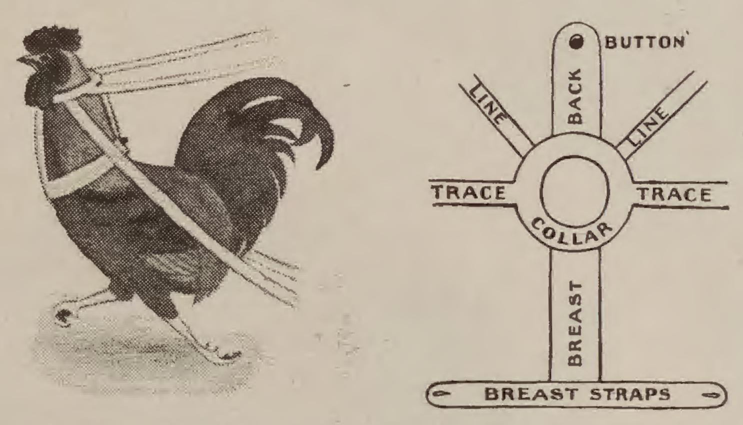
Driving a Bantam Rooster

By Nellie York Spangler

ONE summer, after my small nephew had entirely exhausted his own resources in the way of amusements, my husband suggested, and helped him to carry out, a plan that proved so entertaining to him that I describe it, hoping that others may enjoy it.

It was suggested that the boy should drive the bantam rooster.

His uncle drew a pattern of the harness and sent it to me. I cut it from heavy drilling, stitching the edges firmly on the sewing-machine. While I made the harness the boy and his uncle were making a very light cart, using a small-size cigar-box for the bed, and cutting the wheels and shafts from half-inch pine.



THE BANTAM ROOSTER, AND DIAGRAM OF HARNESS

The bantam rooster always had been accustomed to being handled, and although by no means a pet he was not greatly frightened when that queer harness was put on him, and in a short time he was trained so that he could be driven.

They would "take a turn" up and down the walk in front of the house, then come back and "tie up" near the porch. Then the rooster would be given a few grains of corn and some water. Perhaps this feeding was what made him enjoy the fun so well that he soon began to crow while in the harness. However, I think, also, that his vanity was pleased because of the sensation he caused and the attention he received.

When the child went home a pasteboard box with plenty of air holes in it contained his beloved bantam, while snugly packed in his valise were the cart and harness. When he appeared on the avenue the next morning after his arrival, driving his feathered pony, you may be sure "the boys" were excited.

A County Fair for Children

By Alfred Anderson

I HELD a County Fair for children in a large grove. I sent invitations to twenty-five children with these conditions: All of them were to bring something for exhibition—some of their own work, if possible. The girls were to bring cakes, cookies, candies, their dolls, needlework, or anything in which girls take an interest; the boys, something they had raised on the farm in the shape of vegetables, grain, or their pets (if any), and little things that boys like to make.

Meantime I procured a large tent in which to have the exhibits. In several of the trees I hung rope swings, and in others home-made hammocks made from barrel staves. The day before the Fair I drove around and gathered up the things, and to judge by the load we were to have a grand exhibit.

Before nine o'clock the children began to arrive, seemingly very happy, as their merry laughter and fast talking would indicate. By ten o'clock they had all arrived. They helped me arrange the exhibits and examined each article until noon, when we were called to dinner, which was served on a long table under the trees.

When the time came for my wife and me to act as judges we were compelled to admit that it was no easy matter. Nevertheless, we came to the conclusion that the first prize, consisting of a bat and ball, must go to a boy of fourteen years, for a complete miniature wagon. The second prize went to a boy of ten years, who had a little pug dog taught to do some wonderful tricks. This award was given for the boy's ability as a trainer. The other boys received small prizes, such as penknives and books.

The first prize to a girl was a fine work-box for having a pretty sofa-pillow. The second prize was a book for the best cake. Small dolls were given to the other girls.

While the judging was in progress the children were eagerly listening to a phonograph which rendered fine selections. Some of the boys had their harmonicas with them, upon which they played several tunes. Many of the girls read aloud favorite selections.

* * *

The rest of the afternoon was spent in sports of various kinds, such as a foot-race, an egg-race, a three-legged race, jumping and "Bombay." The contestants in the egg-race were to run one hundred feet with an egg held in a spoon at arm's length. The winner would be the first one in without dropping the egg. The three-legged race was run by several boys. Two had their legs nearest each other, as they stood side by side, securely tied. They were then to run or hobble to the goal. The first pair to cross the goal won. "Bombay"—a game for boys—was played by having one boy stand in a stooping position while the others jumped over him, at the same time performing queer antics.

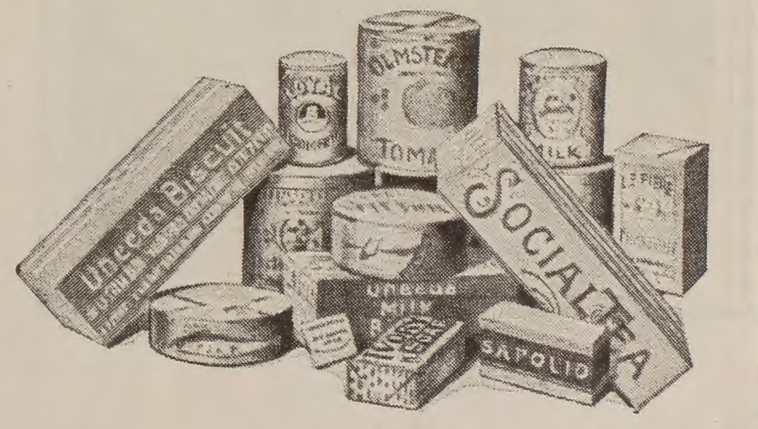
The parents had contributed money with which to buy candy and peanuts, also lemons for lemonade, to which all had free access during the day. At six o'clock the girls served ice cream and cake.

Keeping "Real Store"

By Effie Stokes Levy

MOST children are fond of "playing store," though the "store," as a rule, is composed of very crude material. My plan is to give them a "real store," and in this way both large and small children can be amused for hours at a time, the children taking turns at being "storekeeper."

The illustrations will show a few of the articles with which to stock the store. Labels and wrappers taken from canned goods, crackers, etc., may be collected during the winter, and the children help some older member of the family in their manufacture. Curtain-poles, shade-rollers, etc., are cut into the required sizes; the ends are covered with silvered paper taken from soap, etc., and the label is then pasted around the outside. That portion of the label should be used which affords the best description or idea of what the tin or package is supposed to contain.



ALL READY FOR THE STORE

The packages of crackers are made from blocks of wood, cut the desired length, and covered with wrappers from every sort of cracker. When the wording of the wrappers cannot be put into a small enough space the necessary words may be cut separately, leaving no margin around them, and placed close together.

Cans of baking-powder, mustard, cocoa and numerous other articles may be made in the same way. Dried and split peas, marrow beans, and such other inexpensive groceries, may be given to the children in small quantities at a time.

Either the father of the family or an older brother could put together roughly a small, portable arrangement of shelves and a counter. A small set of scales can be purchased at little cost. If one is ingenious the result will be a well-stocked, well-appointed little store, at a very slight expense.

Another page of ways to entertain children during their vacation will be given in The Journal next month. "How to Make a Bicycle Boat" will be illustrated and described, and there will be a number of other original ideas given.

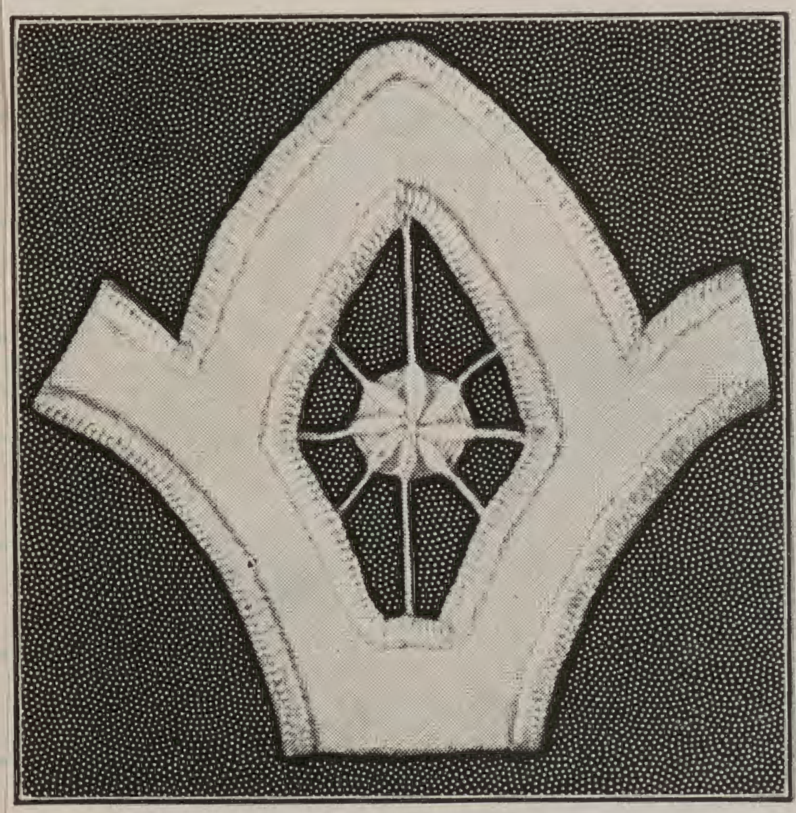
COLLAR SHOWING RUSSIAN STITCH AND NET STITCH

RENAISSANCE embroidery, commonly known as cut-work, has from time to time been in vogue, and is sure to be an attractive feature in the make-up of this summer's gowns. It is especially well adapted for costumes of linen, piqué, etc. While the work is simple, much care is required to produce the desired effect. No portion of the work can be slighted, for accuracy is one of its chief beauties. Heavy butcher's-linen and a fine corded piqué are especially desirable for dress garniture, as both are firm to work upon and launder well. For the buttonholing embroidery-cotton in white or colors is used.

Three stitches are characteristic of this work—buttonhole-stitch, twisted and buttonholed bars, and wheels. Eyelet-holes and solid dots also play a prominent part in the work. There are, of course, variations of these stitches. For instance, picots are sometimes added to the plain buttonholed bars, and in place of the wheels more elaborate filling-stitches are used. A Persian effect, obtained by using shades of red, blue, green and yellow on a groundwork of gray linen, is very artistic. On white material only white, black or delicate shades are used.

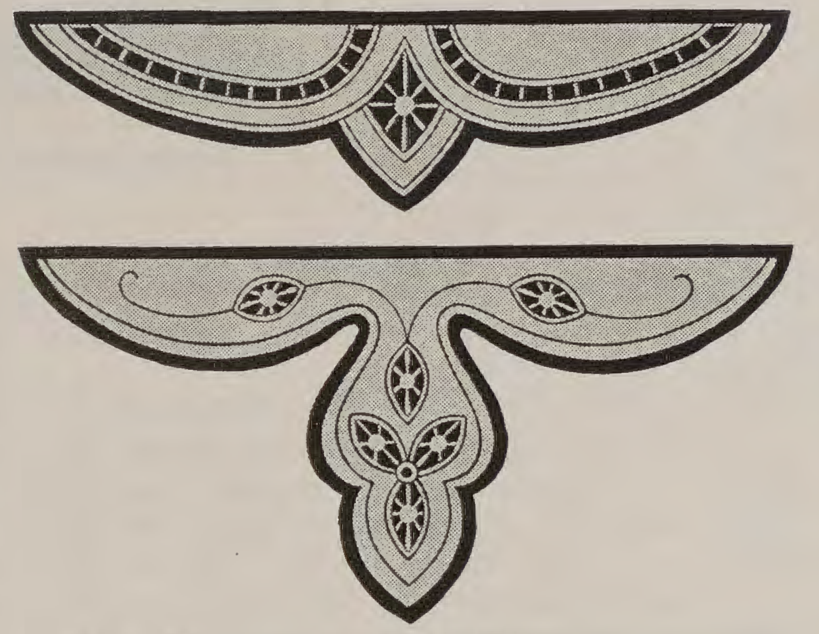
The pattern is stamped directly on the fabric. The work should be executed in an embroidery-frame, otherwise it is almost impossible to avoid puckering the work.

The first step in the work is to outline by a running-thread of coarse cotton the edges of the pattern where the linen is to be cut away. Fasten in the thread by a few stitches, and finish in the same way, never using a knot, a rule to be observed throughout the entire work. Where there are scallops, as in one of the patterns shown, a padding of run-threads is used. The threads should lie thickly and solidly in the center, and shade off on both sides, as the fullness and roundness of the embroidery depends on the firmness of the foundation. The solid dots are also thickly padded.



DETAIL SHOWING SPINNING-WHEEL ROSETTE

In cut-work the plain straight buttonholing is generally used. Only rarely does the long-and-short buttonholing appear. The bars which connect the different parts of the pattern are worked at the same time as the buttonholing. That is, a portion of the buttonholing is worked until the place for a bar is reached; then, without cutting, the thread is passed across where the bar is to be caught at the other side, and twisted back to its starting-point. The buttonholing is then continued until another bar occurs. If the thread, instead of being twisted back, is worked back with buttonhole-stitches, the bar is heavier and more effective. The width of the bar is regulated by the number of foundation-threads laid for it. A lace picot is sometimes added to the center of the bar, and adds greatly to the beauty of the work. The three bars are shown in detail in the illustration.



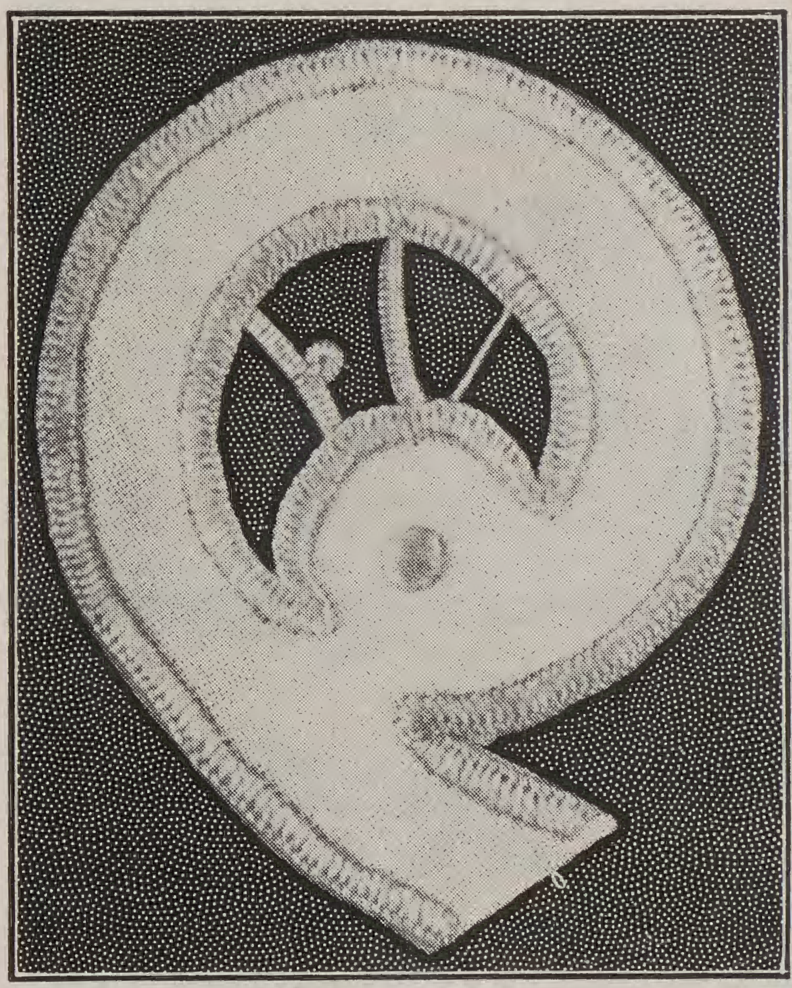
A PAIR OF PRETTY PROTECTION COLLARS

There are two styles of wheels generally used. One is made by the simple over-and-under weaving of twisted bars. The other, called the spinning-wheel rosette, is more elaborate and much more effective. It is made on the same foundation-threads as the simple wheel, but the working-thread is carried under two radii instead of one. It is drawn up closely and firmly, and is then passed under the second of these radii and also under the next one, and so continued. The result, as shown in the illustration of the detail, is a raised twist or coil over each radius. In place of wheels rings are often used. These are held in place by twisted bars. For white work the Battenberg rings are suitable. If the work is in colors, rings of the required size and shade must be made. There are little ring-gages for this purpose. The thread is wound around the gage a sufficient number of times to make the ring of the correct thickness. The threads are overcast and the ring removed from the gage without spoiling its shape. It is then covered with a close row of buttonhole-stitches or with a single row of crochet.

Lace stitches may be introduced with very pleasing results. Insertion stitches readily take the place of twisted bars where the open spaces are narrow, and simple net stitches are used where wheels generally appear.

A rapid and highly effective way of making cut-work is to follow the outlines of the pattern with a narrow braid loosely held down by buttonhole-stitches. After the work is entirely completed, the portions to be cut away are removed by means of sharp scissors, the cutting being done always on the wrong side.

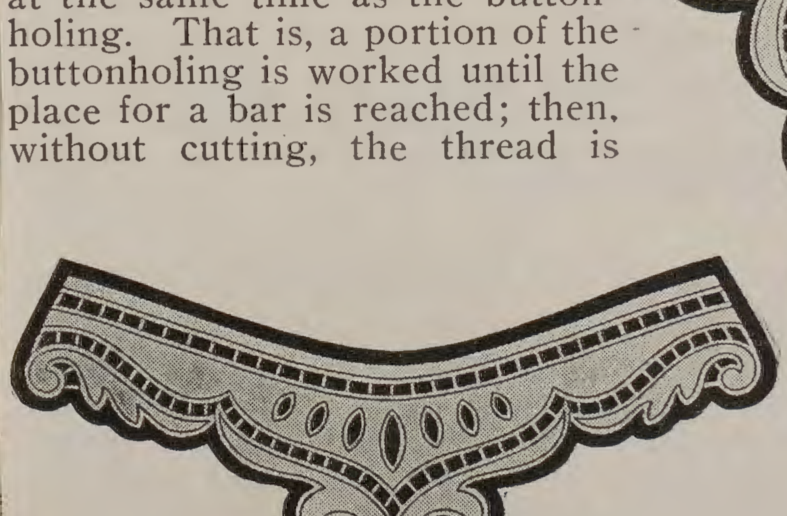
The stocks and collars shown are all suitable for wear with this summer's gowns. The all-white piqué stocks and the protection collars of heavy white linen worked with white are sure to be popular. These ideas and many others may be carried out in white or colors.



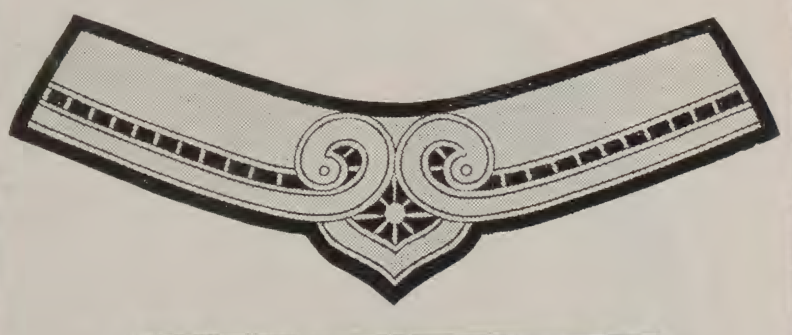
DETAIL SHOWING THREE DIFFERENT BARS

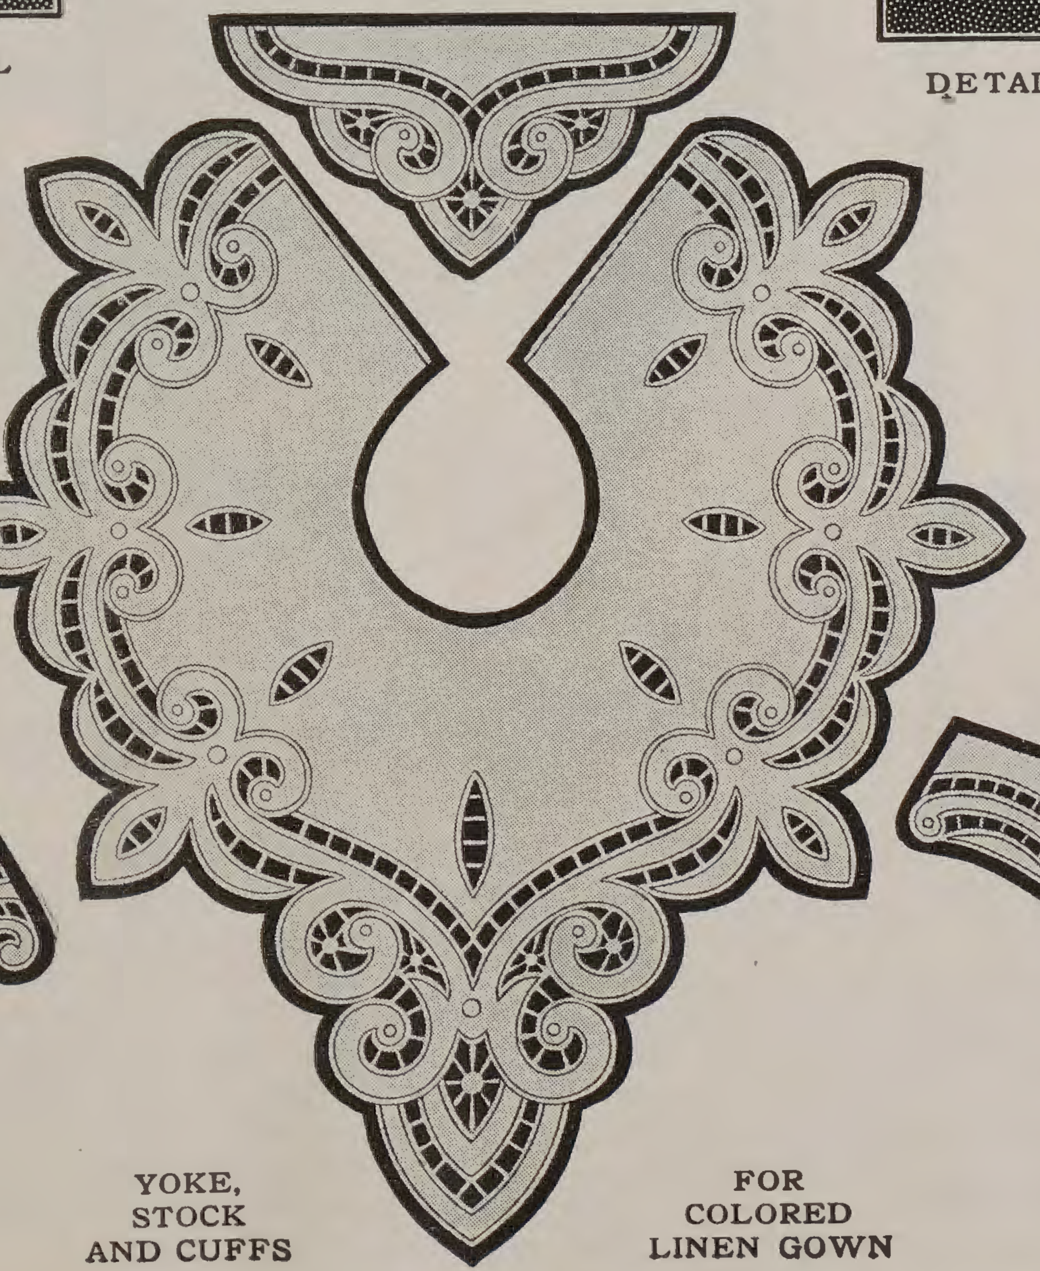
For a colored linen gown there is a yoke, with stock and cuffs to match, embroidered with white. If one wishes to simplify the work in the yokes, the inner row of cut spaces may be omitted.

A narrow, flat collar in white is one of the simplest and daintiest styles in neckwear. In the design shown the plain Russian stitch and net stitch are used where the linen is cut out.

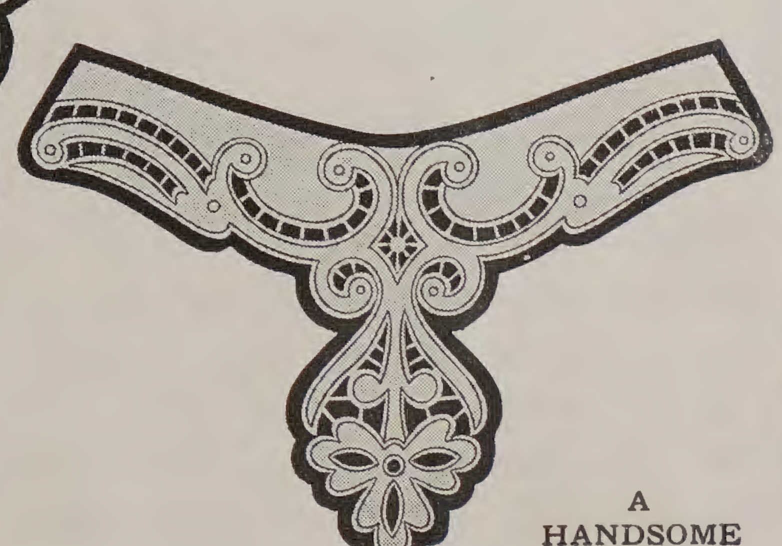


SIMPLE BUT EFFECTIVE





YOKE, STOCK AND CUFFS FOR COLORED LINEN GOWN



A HANDSOME STOCK
